

OVERVIEW BY STUDY CHARACTERISTICS (n = 36)

A

MOVEMENT TYPE

Total Studies (n = 36)

- Gait-related Analysis 18 (50.0%)
- Stereotyped Motor Movements 7 (19.4%)
- Fine Motor Movements 4 (11.1%)
- Hand/Wrist Movements 3 (8.3%)
- Gesture Patterns 3 (8.3%)
- Other / Whole-body 1 (2.8%)

Gait analysis is the most frequently investigated movement type, covering half of the included studies (50.0%).

B

METHODOLOGICAL APPROACH

Total Studies (n = 36)

- Traditional / Classical ML 20 (55.6%)
- Deep Learning 12 (33.3%)
- Hybrid (ML + DL / Transformers) 2 (5.6%)
- Statistical / Validation 2 (5.6%)

Traditional machine learning approaches remain the most commonly used (55.6%), followed by deep learning methods (33.3%).

C

LEARNING TYPE

Total Studies (n = 36)

- Supervised Learning 34 (94.4%)
- Statistical / Validation 2 (5.6%)

Supervised learning is dominant in the literature (94.4%).
